

Weekly Report 4

-Anssi Uistola, 2502616
-Juho Valkama, 2503673
-Topias Syri, 2504627

Idea

Our missing parts finally arrived and we have been studying how to connect them with arduino.
New parts included remote control, so we decided to use it in our final product.

Process

This week has been pretty quiet.

Anssi finished 3D model, there is few more questions about the model and if it fits in to the printer.

Topias and Juho have been focusing mostly on arduino.

Errors

We got printer reservation at 24.4. which is way later than we expected. So we must improvise
and make sure that all of our parts are ready, when model is out and can be set in place.

Reflections

Everyone is knows what they are supposed to do next and we might held out new meeting later
next week.
