

### **Weekly report 3**

-Anssi Uistola, 2502616

-Juho Valkama, 2503673

-Topias Syri, 2504627

#### **Idea**

We have started the practical work on the prototype.

We are not quite sure yet if we will use buttons or a remote to control the device

#### **Process**

We held a 4-hour long meeting at Anssi's place, where we did the majority of the work for this week.

We have received the parts, and started testing different things with the Arduinos.

The design model was completely overhauled to include holes for screws, and other small improvements, such as the location for the wheels.

#### **Errors**

The first iteration of the model was not good, so it had to be completely redesigned

#### **Reflections**

We have quite a good feeling about this project, and haven't yet had any major issues.
